COLLABORATION DISPLAYS

Access on-demand and live content with Appspace and the Webex Board

Use the Webex Board to browse on-demand and live content, as well as showcase company updates when it is not being used for collaboration.

The way people work today is changing. The modern workplace is an always-connected environment that expects instant access to information while establishing great value from technology that occupies its real estate. With Appspace, Webex Boards increase their value by delivering presentations, video, reports, and other information to the right people in the workplace.

Appspace Cards make sharing any information effortless. Publish once and view anywhere with brand consistency and flawless formatting. Integrate Appspace into any network with the enterprise-level administrative controls you would expect.

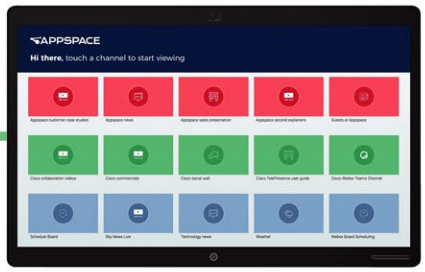
Features & Functions

Author cards and publish them into channels



Browse channels on the Cisco Webex Board

Flexible Deployments
Deploy from the cloud, onprem, or a combination of both. Publish to endpoints connected to the Webex Cloud.

Compatible Endpoints
Publish to any of the following:

- Webex Board 55
- Webex Board 70
- Webex Board 85

Endpoints must be running Webex Board OS with the **Web View** functionality enabled.

How It Works

To get started, you will need an Appspace account, a compatible endpoint, and network connectivity to the cloud.

First, register the Webex Board. This is done with an advanced registration option called **Preregister Device**. Once registered, go to Devices and copy the start-up URL for your device.

Next, in the Appspace console, create a channel to display in signage mode and other channels for on-demand use. Channels support cards, images, video, and live streams. Publish all channels to the registered Webex Board. Using signage APIs provided by Cisco, enable the start-up URL and interactivity to complete the setup.

From here, use the Webex Board to browse the published channels using the **Appspace Progressive Web App (PWA)**. Any changes to your channels will be automatically synced to the Webex Board. A channel can also be overridden with important or emergency messages using alerts. Appspace alerts can be triggered by **Singlewire's InformaCast.**

Platform for the Modern Workplace. Cisco Collaboration Endpoints are just one of the experiences possible with the Appspace platform. Try Appspace for digital signs & video walls, room scheduling, enterprise TV, kiosks, and more. To learn more visit **appspace.com**

Built for the cloud. The Appspace platform is fast, secure, and grows with you. With flexible configuration settings and powerful administrative tools, deployments are tailored to you.
