

COLLABORATION DISPLAYS

Extend your reach with Appspace and Crestron collaboration displays

Use Crestron collaboration displays to showcase company updates when they are not being used for video calls or presentations.

The way people work today is changing. The modern workplace is an always-connected environment that expects instant access to information while establishing great value from technology that occupies its real estate. With Appspace, Crestron collaboration displays increase their value by delivering announcements, reports, and other information to the right people in the workplace.

Appspace cards make sharing any information effortless. Publish once and view anywhere with brand consistency and flawless formatting. Integrate Appspace into any network with the enterprise-level administrative controls you would expect.

Flexible deployments

Deploy from the cloud, on-prem, or a combination of both.

Compatible devices

Publish to any of the following:

- Crestron Mercury™
- Crestron AirMedia™ 3100
- Crestron AirMedia™ 3200

The Appspace App is enabled through the device firmware and can run Signage as a Background mode, Signage in Standby mode, or both.

How it works

To get started, you will need an Appspace account, a compatible endpoint, and network connectivity to the cloud.

First, enable the Appspace App in the Crestron firmware. This will restart the device and launch the Appspace Progressive Web App (PWA). A registration code will be displayed.

Next, in the Appspace console, register the Crestron device. Then, create a channel that can be used for the signage modes that are enabled. Create two channels if you want different content for each mode. Crestron devices support channels containing cards and images. Publish all channels to the registered Crestron device.

From here, any published changes to your channels will be synced for display on the endpoint. A channel can also be overridden with important or emergency messages using alerts. Appspace alerts can be triggered by Singlewire's InformaCast.

Platform for the modern workplace. Crestron's collaboration displays are just one of the experiences possible with the Appspace platform. Try Appspace for digital signs & video walls, room scheduling, enterprise TV, kiosks, and more. To learn more visit appspace.com

Build for the cloud. The Appspace platform is fast, secure, and grows with you. With flexible configuration settings and powerful administrative tools, deployments are tailored for you.
