

APPSPACE + METRIKUS

Empower employees with real-time workplace solutions

Appspace and Metrikus work together to keep workplaces safe, healthy, and productive.

Today's organizations are striving to create workplaces that offer frictionless employee journeys while prioritizing sustainability, productivity, and team wellbeing. That's where Appspace and Metrikus come in. Together, we empower employees with valuable insights about their working environment.

As a data aggregation platform, Metrikus integrates with building data from a range of trusted data sources and makes it meaningful. With Appspace, you can display this real-time data on meeting room panels and other digital signage, as well as through employee apps.

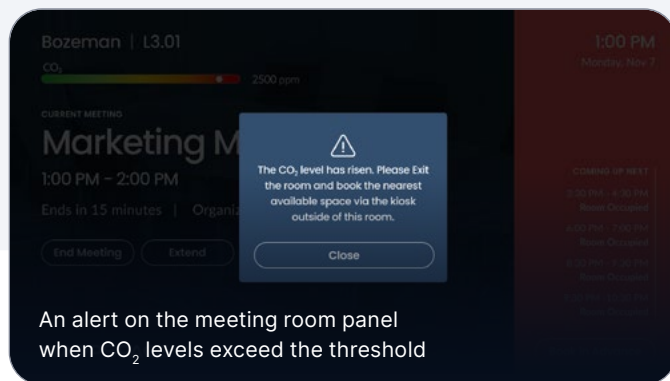

Unlock the potential of your workplace with Appspace + Metrikus.

- Improve the work environment: Access to real-time indoor air quality (IAQ) data helps employees feel confident that they're working in a healthy environment.
- Help people make informed decisions: Employees can choose meeting rooms that aren't fully occupied to make the best use of space and avoid overcrowding.
- Keep your workplace safe and secure: Manage visitors and staff activity in a hassle-free way with tools like self-service or mobile check-in.

How it works

Appspace integrates building data from the Metrikus platform using their data APIs, allowing organizations to keep their employees informed about real-time data in the building, so they can make smarter decisions about how they work. The two most common customer use cases and data sources for the Appspace and Metrikus integration include:

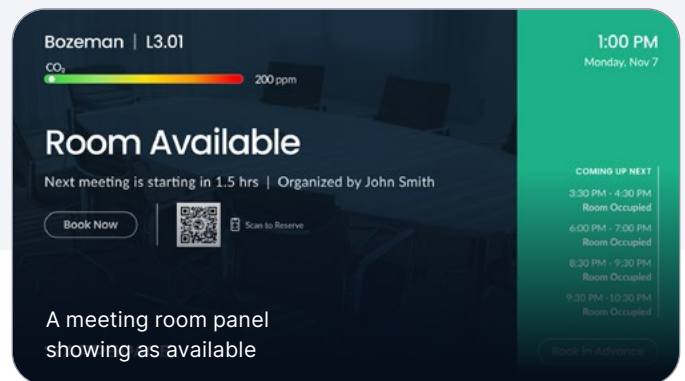

Indoor air quality data

Using indoor air quality (IAQ) data through the Metrikus platform, real-time readings from the sensors help ensure a safe and healthy environment for everyone.

With that data displayed on digital signage, employees can stay informed about the air quality in different meeting rooms or spaces, so they can choose where to work based on their preferences for things like noise, light, and temperature.

And if the air quality in a meeting room goes beyond a certain threshold, like high levels of CO₂, alerts can be sent to the meeting room panels.

Occupancy data

With real-time occupancy data, employees can easily find less crowded areas in the office to grab an empty desk or meeting room.

Plus, it gets better. This data can also help detect when someone doesn't show up for a booked meeting (i.e. when the occupancy stays at '0'), freeing up the room on the booking app after a chosen timeframe. Say goodbye to wasted employee time.

Why Appspace + Metrikus

Working together, Appspace and Metrikus enhance every aspect of your organization. We have powerful unified architecture and solutions that you can configure to match your needs and environment, for both employees and consumers.

1. Save time and resources

With better air quality, employees are less likely to experience discomfort, headaches, and fatigue, leading to increased productivity and overall well-being. Research shows that employee well-being at work increases worker productivity by up to 12%. With insight into occupancy levels, space planning can help employees find available spaces and collaborate more easily.

2. Improved health and safety

Real-time alerts through digital signage and an employee app can help employees stay informed about potential health risks and to take necessary action when necessary, thus promoting a safe and healthy working environment

3. Enhanced meeting room utilization

Employees can choose meeting rooms that aren't fully occupied, so there's no overcrowding. Also, knowing the room occupancy levels helps avoid waiting and boosts productivity by reducing downtime.

4. Security and reliability

Appspace and Metrikus software work together to meet buyer security and performance expectations. Plus, they can be managed remotely to minimize downtime.

Learn how we brought our joint solution to life with a global biopharmaceutical company.

When opening a new headquarters that needed to appeal to a hybrid workforce of 9,000, our joint customer's vision was to make their office the healthiest and most sustainable headquarters in the world.

They wanted to create the ultimate workplace experience – a safe and productive environment that employees would want to be in. Good indoor air quality, simple room and desk booking, and seamless communications were all must-haves.

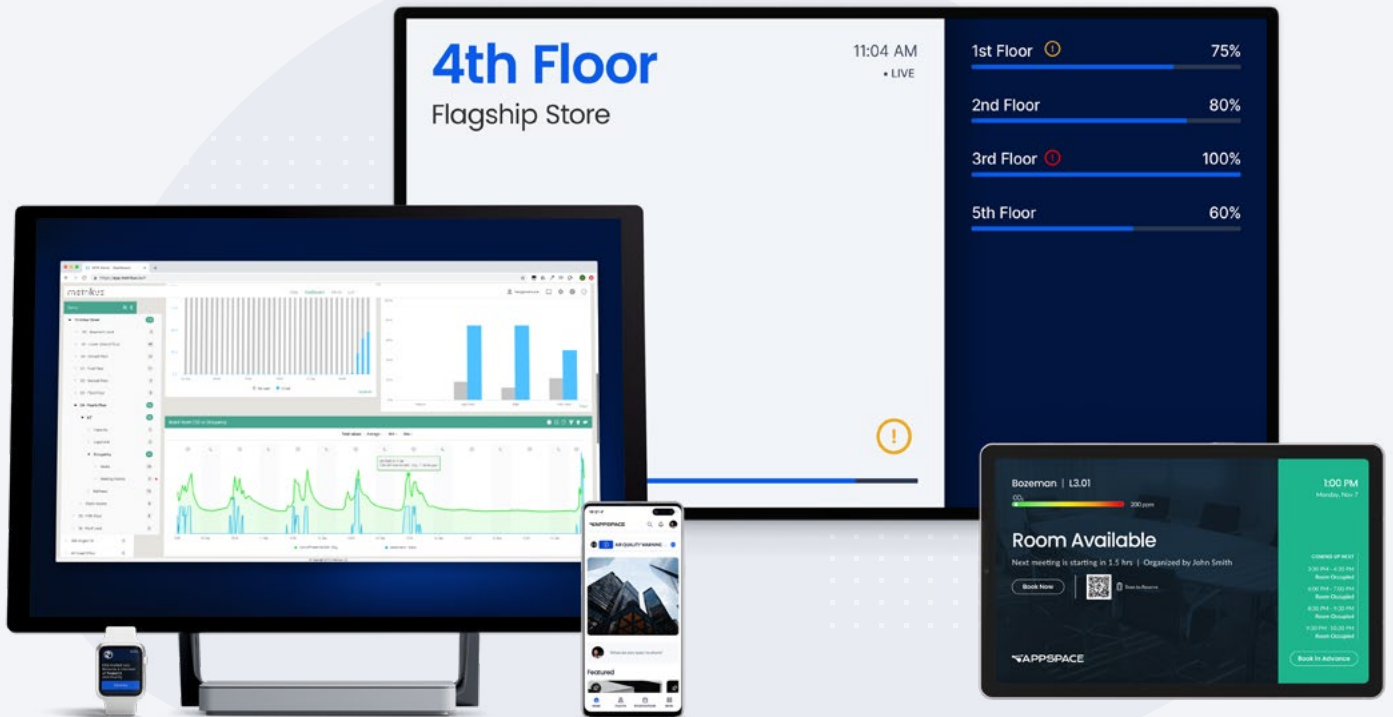

The solution? Cleaner air for a safer and more productive workforce.

In addition to easy-to-manage room and desk booking for employees, the customer wanted to monitor carbon dioxide (CO₂) levels in meeting rooms. So we created an easy way to display this data on meeting room panels and digital signage.

When the air quality decreases, the Appspace Broadcasts feature utilizes Metrikus' rules and conditions to trigger an on-screen alert that says it's time to exit and book another room. And rooms with elevated CO₂ levels show up as "unavailable" in the system.
